

Make your contribution to the use of sustainable energy visible!

Add your examples on the European map for renewable energies and energy efficiency to motivate people in your neighbourhood to use these technologies as well:

www.repowermap.org

It's free to participate in this initiative, and each example counts!

Make your contribution to the use of sustainable energy visible - Add your examples on the European map for renewable energies and energy efficiency!

What is this initiative about?

A European initiative funded by the European Union and supported by a broad network of organizations, regions, local authorities, and other energy actors aims to promote renewable energies and energy efficiency by making concrete examples visible in each person's neighbourhood on an interactive online map. The idea is to encourage people to get inspired by these examples and to facilitate know-how exchange at local level and across borders. The map is shared and made known by many energy actors participating in the initiative. Participate free of charge in this awareness raising initiative to motivate people in your neighbourhood to become active in using renewable energies and energy efficiency as well!

How do you participate?

1. Add your renewable energy installation(s) or your energy efficient building(s) onto the map, including a picture and a short description:
www.repowermap.org > "Add to the map".
2. Invite others to add their examples as well, and spread the word about the initiative.
3. If you have a website, you can integrate a map of your region or a map with the examples you have added onto the map easily and free of charge into your website.

It's free to participate in this initiative, and each example counts!

Contact persons

Go to www.repowermap.org/partners.php and find the person to contact in your country. If there is not yet any contact person in your country, contact us by sending an e-mail to recontact@repowermap.org.
